

## Not your father's bike

**T**hrow out those stuffy notions about what a motorcycle has to look like. And get ready to change your thinking about what a motorcycle has to feel like. The revolutionary Honda DN-01 is here, and it's shaking up the motorcycling establishment like few bikes before it.

Part cruiser, part naked bike, part sport-tourer, with even a little bit of big scooter and small sports car thrown in. That's the DN-01 in a nutshell. But this is a bike that's hard to categorize, because it's like nothing else out there. Designed to create a nearly seamless connection between you and your riding environment, the DN-01 features a relaxed, low seating position, a clear view to the road ahead, and a remarkable transmission that lets you choose the type of shifting you want.

Slide into the DN-01's spacious seat, grab the swept-back handlebar, place

your feet on the wide floorboards, and notice how you immediately feel comfortable and in control. Weight is precisely distributed for excellent stability — especially at high speeds — while the steering geometry is tailored for responsive handling.

Twist the throttle and bring the 680 cc fuel-injected V-twin engine to life, and feel how the DN-01's Human Friendly

Transmission (HFT) smoothly transmits power to the rear wheel. It's the most advanced fully automatic transmission ever developed for a two-wheel vehicle. HFT allows you to ride in fully automatic mode, or you can shift it like a manual transmission via handy handlebar-mounted push buttons.

We can describe the Honda DN-01 in words, but words can't begin to tell you how much fun this amazing motorcycle is to ride. If you want to take a bold step into the future, this is the bike for you.

- >>> Revolutionary variable automatic Human Friendly Transmission (HFT) features three modes: Drive, Sport and push-button-selectable 6-speed Manual
- >>> Compact 680 cc liquid-cooled, fuel-injected V-twin engine with four valves per cylinder delivers strong, smooth power to the rear wheel via dependable shaft drive
- >>> Smoothly responsive Combined Braking System with ABS helps to ensure confident stopping ability
- >>> Single-sided Pro-Arm aluminum swingarm adds to the DN-01's distinctive look
- >>> The position and operation of many of the controls has been specifically designed to feel comfortable and familiar to car drivers, making the transition from car to bike easier
